

AP-300 Ceiling Lift

Portable Lifting Solution for Any Room

The AP-300 Advantage

A good lift does two things: goes up and goes down, safely and reliably. Built on an industry-leading reputation for reliability proven over the past decade, Handicare's new AP-300 portable ceiling lift raises patient handling technology to the next level—wherever you need it. Reducing injuries for patients and caregivers alike, the AP-300 portable ceiling lift is quiet, smooth and features a lift capacity up to 300 lbs.

The AP-300 is the next step in portable ceiling lift technology—raised to the next level.

Antimicrobial Strap with Wear Indicator Marks

The **advantage** of reduced risk

Active Shielding

In medical environments, microbes proliferate. Protecting patients from infection that can spread like wildfire is a challenge every healthcare facility faces. Handicare AP-300 ceiling lifts provide you one more shield against infection for your patients.

Microbe Growth: Untreated Strap vs. AP-300 Strap

Microbe growth on untreated strap fibres

Growth on treated Handicare AP-300 Series strap fibres

Easy Maintenance

Easy to clean and disinfect, AP-300 lifts include a strap that has been treated with a specialized antimicrobial coating at the fibre level. The coating inhibits microorganisms' ability to grow on the surface of the material, thereby reducing the risk of infection while improving both safety and outcomes for patients.

Monitor Wear

Our lift strap also features wear indicator marks so you know when it needs to be replaced. And its reinforced edges protect against fraying and normal wear-and-tear to enhance the overall life of the strap.

Lightweight Ergonomic Hand Control

The **advantage** of ease of use

Intuitive Design

Featuring a simplified and functional form factor, the AP-300 hand control is very easy to use featuring two clearly marked buttons for moving the ceiling lift up and down. The highly responsive tactile buttons provide convenience, while the lightweight ergonomic design gives the user additional comfort.

Waterproof technology protects the unit from outside moisture.

Accessible Controls

An integrated control panel is located on the front of the lift for easy accessibility. Here you can find buttons to raise and lower the patient, battery status indicators and the E-Down button for emergency lowering. An Emergency Shutoff Switch is also located on the back for additional safety.

Handset Charging with Increased Battery Life

The **advantage** of accessible charging

Highest Rated Battery of any Portable Lift

Equipped with an industry leading high capacity rechargeable battery, the AP-300 provides 65% more lift cycles than our previous generation portable ceiling lifts. A workhorse that can do much more before requiring a recharge.

Charge your Lift Hassle Free

The AP-300 comes standard with handset charging making it easier to charge your lift every day. Simply plug your charging adapter into the hand control to begin charging your lift. Wall receptacles that are far away are easier to get to now that you have the added length of the hand control.

Proven and Always Dependable
The **advantage** of ultimate safety

Revolutionary **SafeGuard** Hook

Designed for safety the AP-300 **SafeGuard** Hook features a unique side loading system and closed loop design that minimizes sling loop migration.

For added safety the **SafeGuard** hook is designed to be 100% load bearing anywhere on the inside, outside, and even the latch itself.

The hook pivots upwards when not in use for added convenience and portability.

Easy Service

The AP-300 is easy to maintain and service, the top cover of the lift can be easily removed and service can be done while the lift is still on the track with access to all serviceable parts.

Active Angle Detection with Safety Sensors

The **advantage** of technology + security

ActiveSense Tilt Detection

The first portable ceiling lift to utilize state of the art active gyrometric and safety sensors, the AP-300 with **ActiveSense** Tilt Detection can automatically detect when users are incorrectly tilted at unsafe lifting angles. An audible warning is given to the healthcare professional during the transfer allowing them to correctly re-position the user before continuing. The addition of **ActiveSense** also greatly reduces strap wear along with overall stress on the lift.

Go Anywhere With Ease

Lightweight and portable, the AP-300 portable lift can be removed from one track and installed in another, quickly and easily, giving you the freedom to share a single lift unit with fixed or portable ceiling track systems in multiple rooms.
