

## SelectAir Wicks Away Moisture Problems.

### Wicking Action

Air escapes through tiny holes on the top of the mattress, and circulates under a vapor-permeable cover, to wick moisture away from patient.

### Keeps Patient Cool and Dry

"True" Low Air Loss technology allows air to escape from the top of the mattress and directly interact with moisture at the patient/bed boundary.

### Exceptional Foot Protection

Foot pillow to address patient migration.

### Integrated Side Bolsters

Keeps patient centered in the bed and reduces the risk of entrapment.

### User-Friendly Control Unit

Rapid inflation, easy set-up, and a motor so quiet, the patient will hardly know it's there!

### Quick-Change Filter

Filter is easy to access, and quick to change for hassle-free maintenance.

## HybridSelect with HealFloat™ Feature Provides Ultimate Skin Protection.

### HealFloat™ Feature

Provides optimal heel protection while the patient is lying in the bed.

### ROHO® HIGH PROFILE® Cushion

Simply remove the ROHO HIGH PROFILE Cushion and place on any seating surface for continuous skin protection.

TECHNOLOGY  
BORROWED FROM  
NATURE.

EQUALLY DISTRIBUTE  
PRESSURE  
AND STAY DRY.

The world's first low air loss mattress line to carry the MOXI® name.

The MOXI name has long been synonymous with the highest quality DRY FLOATATION® products. When we decided to add a low air loss mattress system to our product group, we searched for a brand that would meet the high quality standards our clients and clinicians expect from a MOXI product. SelectAir® is that brand, and we now manufacture the SelectAir line in our MOXI facility in Belleville, Illinois.

MOXI can now offer moisture control for added patient comfort and safety.

MOXI DRY FLOATATION products are known for exceptional protection against pressure, shear and friction. SelectAir is a product line that also guards against moisture. It is a cost-effective alternative to fully-integrated bed systems, and is ideal for clients who need special protection from the damaging effects of excess moisture on the skin associated with perspiration.

SelectAir controls moisture with wicking action. - Air gently blows underneath a vapor-permeable cover, wicking moisture away and keeping the skin at a healthy moisture level. The wicking method has several benefits over direct air flow alternatives. It is much less likely to over dry the skin (a clear contra-indication to moist wound healing). It also reduces the risk of airborne pathogens, and provides additional comfort for patients who tend to feel cold or simply find it unpleasant to have air blowing directly on them.

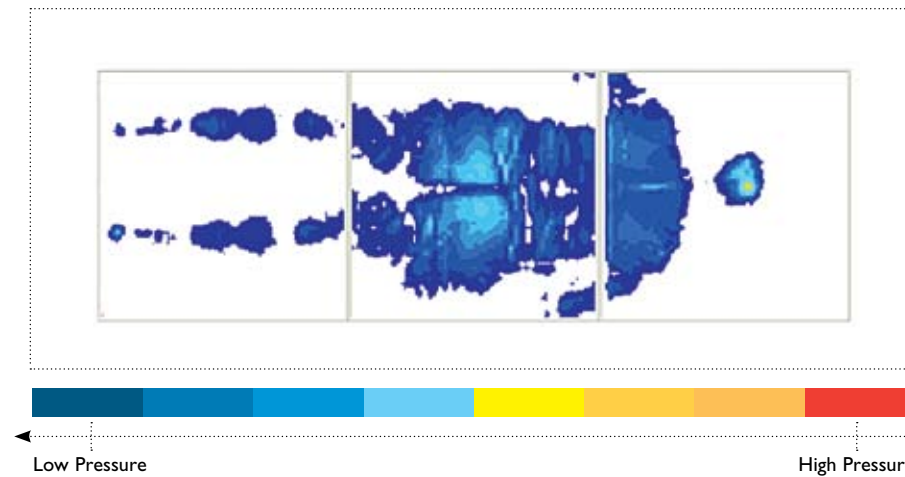

All SelectAir mattresses can be used on patients with any stage ischemic (pressure) ulcer, myocutaneous skin flaps, skin grafts and/or patients with temperature, moisture control, or pain management issues.

The HybridSelect® is a low air loss mattress overlay system that revolutionizes the overlay market by providing customized comfort and optimal skin protection. HybridSelect with HealFloat™ combines the power of SelectAir low air loss systems with the skin protection of a MOXI HIGH PROFILE® Cushion in the heel area to create an optimal environment for skin healing and protection.

The MOXI Solution to Pressure, Shear, Friction, and now Moisture!

Pressure Imaging test shows the effectiveness of the SelectAir Mattress. Pressure is evenly distributed, leaving no areas vulnerable to ischemic (pressure) ulcers.

“True” Low Air Loss Technology

The SelectAir system quietly circulates air through individual cells and allows air to escape from the mattress.

Supreme Patient Comfort

Individual cells plus side bolsters and foot pillow.

Upright Patient Mode

Patient can sit upright with no loss of therapeutic benefits.

Wicking Action

Wicking Action

Air escapes from tiny air openings, distributed equally across the top mattress surface, and circulates under a vapor-permeable cover, to wick moisture away from the patient.

SelectAir®

Quiet, portable, lightweight and very reliable, the SelectAir mattress and control unit provide a cost-effective alternative to other pressure management systems.

- Firm Mattress Mode: Helps facilitate nursing care during dressing changes and patient repositioning.
- Upright Patient Mode: Adds support when the head of the bed is elevated.
- Foot Pillow: Helps to prevent unnecessary skin breakdown due to patient migration.

SelectAir® Max

SelectAir Max provides all the benefits of SelectAir plus these special features:

- System Lock: Helps prevent accidental adjustments, and automatically resets the system in case of power failure.
- Auto Comfort: Takes the guesswork out of programming. During set-up, mattress sets optimal pressure according to patient's weight distribution.
- Pulsation (alternating pressure): Provides three cycle settings that continually readjust the system to ensure patient comfort.

BariSelect®

Bariatric patients enjoy ultimate comfort on the BariSelect Mattress. It has two extra inches of depth and a 680-pound weight capacity. It offers more comfort to patients, is less expensive than other fully-integrated systems, and is easier for healthcare workers to operate.

- Quickset: Allows you to input the patient's actual weight, so you can preset the pressure.
- Optional Hand-Held Control: Allows patient to make adjustments as necessary.
- Two extra inches of mattress depth, extended widths and specialized software accommodate extra weight capacity.

HybridSelect®

HybridSelect provides the benefits of SelectAir in a convenient Mattress Overlay featuring HealFloat™:

- System Lock: Helps to prevent accidental adjustments, and automatically resets the system in case of power failure.
- Firm Mattress Mode: Helps facilitate nursing care during dressing changes and patient repositioning.
- HealFloat: MOXI HIGH PROFILE Cushion inserted in the heel area creates an optimal environment for skin healing and protection.
- Pulsation (alternating pressure): Provides two cycle settings that readjust the system to ensure patient comfort.
